

“Green” Electronic Design

Many people today are concerned about the environment and sustainability. The “Green” movement has gained momentum and you may be wondering what changes you can do to conserve energy; yet still enjoy modern conveniences. After all, nobody is going to realistically give up their televisions, electric lights, and climate control in their homes. DSI Entertainment Systems understands this dilemma, and we have carefully selected certain products that conserve energy, and in addition, employ automated control system technology to intelligently coordinate your home’s subsystems.

Bouc Control Systems

Three Industry Veterans with a combined 60+ years experience in Electronics and one goal: To provide cost effective solutions professionally installed for satisfied customers.

Strategy: Streamlined business that contracts the best talent in each discipline to complete system installations on-time, on-budget, at a competitive price.

Bouc Control Systems

put you in control of your home from Simple to Sophisticated...

...with the push of a button.

“Beautifully Blending Style and Technology”

Detailing a completely remodeled luxury residence that incorporated a media room, a house-wide Vantage low-voltage lighting system, complete Crestron systems integration including control of lighting, music, security cameras, and climate.

Whole Home Light Dimming System Installation

Lighting automation and control sets the perfect scene. Create the desired ambience while accenting architectural features and art. Out-of-town or out late, lights execute pre-programmed scenes mimicking lifestyle patterns. Never arrive to a dark home; your iPhone or PC/Mac allows one-touch activation of the appropriate lit environment.

Whole House Music

Your favorite music can lift your spirits and change your mood in positive ways. Imagine easy control of your favorite music from any room in your home. Intuitive in-wall or portable touchscreen remote controls allow easy access to iPods, music on your computer, music servers, XM, Sirius, streaming Internet radio, and broadcast radio.

Media Rooms

Have your Family Room, Great Room, or Den convert into a virtual movie theater at the touch of a single button. DSI Entertainment Systems' design team has years of experience hiding technology into multi-purpose Media Rooms so that the entertainment components do not dominate the room's décor or use.

Access Control, Camera Surveillance & Intercoms

Security systems deter criminals. Access Control denies them entry. Secure your property and control

access without ever locking a door. Easily configure who accesses specific points of entry when with the ultimate solution for a secure premise!

Simple to Use Boardroom & Meeting Room Audio Video Systems

New offerings from Crestron mean that one box can control an entire room whilst routing video to a projector & switching and amplifying audio. Installing Crestron MediaManager hardware not only ensures seamless functionality but also saves valuable space. Iusto odolortisi esto odio commod dui bla cor siscing eugait.

Residential & Commercial Energy Control System

Control your Whole Home Automation System from Anywhere iPod control of Crestron Home.

Imagine easy control of your home theater / media room, iPod, house lighting, security system, climate, motorized drapery / shades, surveillance cameras, and your pool / spa with your new home automation system. This “smart home” technology is also referred to as systems integration.

Energy Consumption can be reduced by one of our systems actively monitoring usage. AudioVisual systems can consume a lot of energy in standby mode (and produce a lot of heat), our systems can ensure they are fully off when they are not required. Lighting dimmed from 100% brightness can prolong lamp life and reduce energy consumption whilst improving aesthetics.
